

Equipson WORK PRO ARENA

Spanish manufacturer Equipson has expanded its WORK PRO range with the launch of a new range of loudspeakers that deliver a reliable, outdoor sound solution, whatever the weather. Available in a range of sizes to suit different applications, the ARENA Series is so durable and robust that it can defy the elements and transform any outdoor space into a high quality sonic experience. Every aspect of the Series' engineering has been carefully designed to ensure that these loudspeakers can withstand the most testing weather conditions. From the hottest, driest day to the coldest, wettest night, these Arena can handle everything that nature throws at it, without missing a beat.

A key feature of the ARENA Series is its ability to deliver high power in a small format. These compact coaxial full-range speakers are available in four sizes (6", 8", 10", and 12") and deliver between 300W and 600W or pure power depending on the model size selected. In all cases clear highs, efficient low-frequency performance and minimized distortion ensure a balanced audio experience. In addition, the ARENA Series features a Dual 8" 800W band-pass waterproof subwoofer that provides powerful low-frequency punch and audio enhancement for any ARENA Series installation.

"We see many uses for the ARENA Series, from general outdoor applications such as fairs, theme parks and restaurant and club terraces, through to outdoor shopping malls, sports arenas and swimming pools where a high quality sound system

doesn't just enhance the overall visitor experience but also provides a vital conduit for important safety announcements," says Juan Jose Vila, CEO of Equipson. "The versatility of this series is unparalleled as it is suited to any venue - indoor or outdoor, commercial or residential - that requires plenty of power from a small and totally weatherproof enclosure."

Environmentally adaptive and with hydrophobically-treated grills, the ARENA Series has moisture-sealed crossovers to protect sound integrity. Polyvinyl enclosures that mimic wood finishes provide additional protection against the elements and ensure that these loudspeakers will continue to deliver great sound for many years to come.
