

HK Audio LINEAR 5 MK II GLL files

For the loudspeakers of the smart and powerful LINEAR 5 MK II series, simulation files in GLL data format are now available for EASE and EASE FOCUS 3. AFMG's EASE software is the globally established standard for electrical and room acoustics simulation. Acousticians, planners and installers can use EASE to create highly accurate simulations of any rooms.

Available free of charge on the AFMG homepage, EASE FOCUS 3 is an acoustic simulation program for 3D modelling of line arrays, sub-arrays, digitally controlled columns and conventional loudspeakers and is based on the EASE calculation module. GLL files contain extremely precise system definitions that describe the mechanical, electronic and acoustic properties of the loudspeakers. The LINEAR 5 MK II GLL files are now available for download from the LINEAR 5 MK II product page.
