

Mackie Launches New EleMent USB Microphone for Ultimate Content Creation

The new EleMent Series EM-91CU+ takes creators' sound to the next level

Mackie, a producer of high-quality professional audio products, today announces a new addition to its fastest-growing EleMent line, the EleMent Series EM-91CU+ USB

Condenser Microphone.

The EleMent Series EM-91CU+ USB Condenser Microphone takes the great sound and quality of the EM-91CU and takes it up a notch, improving the recording quality from 16-bit/48kHz to up to 24-bit/96kHz. The new microphone also includes an onboard mute function and headphone output that makes it even easier to get the perfect take and get silent on the fly.

“Mackie prides itself in constantly improving our products, giving our customers the best in audio gear,” said Tyler Vaughn, Associate Product Manager at Mackie. “Building on the success of the EM-91CU, our team was dedicated to creating a new and improved model with additional features to continue to offer top-quality options for Mackie's customers.”

The EleMent Series EM-91CU+ USB Condenser Microphone continues Mackie's legacy of immaculate sound, reliability, and plug and play ease of use. With professional design inside and out, the EM-91CU+ USB Condenser Microphone features effortless setup with incredible sound, paired with Built-Like-a-tank™ construction for years of reliability.

The low-noise circuitry, cardioid polar pattern, and studio-grade make this mic perfect for content creation, online meetings, voiceover, music, and more. Featuring a plug and play design, no drivers or software are needed to use.

The EleMent Series EM-91CU+ will be sold in 1st Quarter 2022.
