

SSL & sonible Plug-In Bundles

Solid State Logic (SSL) announce that it has partnered with sonible to deliver the first in a new series of production-focused plug-in bundles. The first in the series features SSL's legendary Bus Compressor 2 with sonible's intelligent equalizer, smart:EQ4. The combination brings instant cohesion and clarity to any mix without the need for extensive manual fine-tuning. This is ideal for professional and aspiring creatives.

The history of music recording has seen many celebrated production techniques evolve from combining contrasting sonic characters and workflows. The collaboration between SSL and sonible now brings an exclusive series of music and audio processing plug-in bundles that offer the ideal combination of heritage-based analogue mixing with modern AI-assisted processing.

The first in the new series bundles the SSL Bus Compressor 2, a staple in high-end studio production for decades renowned for its warm, punchy sound, with sonible's intelligent equalizer smart:EQ4 - featuring its unique smart:filter that spectrally balances tracks within seconds. The result is a suite of tools that bring instant cohesion to any mix without the need for extensive manual fine-tuning.

This new bundle, and others to come, provide promising new possibilities and production synergies to a variety of possible audio applications. More bundles are scheduled to be announced in the coming months, each focused on solutions for different production scenarios. The new SSL Bus Compressor 2 / smart:EQ4 bundle will be available for a limited time exclusively from the SSL online eStore as of September 3rd.
