

HK Audio CX 210 LT

Andreas Meyerl from the HK Audio product management presenting the CX 210 LT long-throw point-source loudspeaker. It complements the CONTOUR X series and can be used as a mid/high unit of a main PA, frontfill, sidefill or outfill. The large horn with MCT (Multicell Transformer), which can be rotated for cluster operation, offers very precise dispersion and even and defined coverage of the area to be sounded.
